

Du-For: Your scaffolding supplier, and much more!

From the simplest to the most complex projects, we're your access to the right solution!

Load carrying platforms

An impossible task! Replacing an immense heating and cooling system at 130 meters. We designed a solution that enabled the client to transport parts weighing over 2 280 kg using an F Series-type platform paired with an ingenious system developed to transfer the equipment to the rooftop.

Result: Mission accomplished for the client.

Work platforms

Efficiency! Imagine a work platform that had to be moved 45 times, without ever touching the ground. Du-For did and it rose to the challenge, resulting in the client winning an "excellence in innovation award" in Ontario.

Public works

Ingenuity! A swing stage whose configuration can be adapted depending on the height. For starters, pure innovation. In the end, the client finished the job one month ahead of schedule.

Continuous improvement

Worker safety is an ongoing priority at Du-For. For instance, we developed a new tubular scaffolding system that is assembled more ergonomically and securely. (See page 16)

Suspended platform underneath bridge span combined with modular scaffolding. Simple and effective.

Du-For enjoys a wide range of products to tailor the solution to your specific needs
